

SYSTEM AND METHOD FOR PRUNING AN ARTICLE**ABSTRACT OF THE DISCLOSURE**

- A system and a method are provided for pruning an article to fit in an allocated space of a publication. In one embodiment, the system includes a processor circuit having a processor and a memory with article pruning logic stored on the memory and executable by the processor. The article pruning logic comprises logic to automatically reduce a length of an original article to fit within a predefined space allocation of a publication. This may be accomplished by executing logic to create a pruning copy of the original article to be reduced, logic to remove an amount of content from the pruning copy, and logic to compare a pruned content of the pruning copy with a content of the original article to determine an informational adequacy of the pruned content.
